Q: How can i convert data from one MySQL to another Im trying to convert data from a mysql table(bank.tb) to a table in my other database(client.tb). I have tried the below method but it didn't work. can any one tell me what can I do or what is wrong in the code? I have a code that shows the error ----- Update info to client.tb ----- \$query="UPDATE client SET c\_name='\$client\_name', c\_zip='\$client\_zip', c\_phone='\$client\_phone', c\_website='\$client\_website', c\_email='\$client\_email', c\_street='\$client\_street', c\_street1='\$client\_street1', c\_city='\$client\_city', c\_state='\$client\_state', c\_zip='\$client\_zip', c\_country='\$client\_country', c\_fax='\$client\_fax', c\_address1='\$client\_address1', c\_address2='\$client\_address2', c\_address3='\$client\_address3', c\_address4='\$client\_address4', c\_city2='\$client\_city2', c\_state2='\$client\_state2', c\_country2='\$client\_country2', c\_email2='\$client\_email2', c\_phone2='\$client\_phone2', c\_website2='\$client\_website2'; \$result = mysqli\_query(\$connection, \$query); if(!\$result) { die('Error description: '. mysqli\_error(\$connection)); } else { echo "success"; } UPDATE:

the error message I got from the debug is : Warning: mysqli\_fetch\_assoc() expects parameter 1 to be mysqli\_result, boolean given in C:\wamp\www\c\_test.php on line 84 thanks in advance A: Check the other table structure, if it's the same as client table. Also see if the 2d92ce491b
