If you plan on using Photoshop, be sure to have at least a copy of Photoshop Elements to get you started. * * * # The power of post-processing Most digital camera images are capable of excellent processing, but what if you want your images to stand out from the crowd? That's where post-processing comes in. Post-processing, or image processing, is the use of a number of different types of filters, not all of which will be covered in this chapter, to give your digital image more visual power. This chapter concentrates on the following: * Basic photo-editing tools to apply on individual objects in a single image * Actions for making multiple changes at once * Filters to alter your image's color or tone * Plug-ins that enable you to apply dozens of special effects to your image and watch your smile fade All the tools and tricks covered in this chapter can be used in other parts of your workflow, too. * * * # Guessing what people want While it may seem like Photoshop and image-editing tools are owned by a consortium of people who are either bored or cynical, believe me, people who use these tools are by no means boring or cynical. The reason why Adobe chose to make Photoshop so popular is because it is, in fact, a tool that's extremely useful for photographers. It's not a tool that's just for laying out your wedding invites. Photographers use image-editing tools to correct their mistakes or transform their images into something that's uniquely theirs. The tool that's most useful for photographers, though, is the camera. You can correct your images when you take them, or in post-processing. You can even make your images look like a painting. Images from cameras come out of the camera as basically flat, two-dimensional objects, so you can use the effects of post-processing to give your images 3D-like quality. But how much can you do with Photoshop? If you're going to take a photo with the aim of using it in something larger, such as a website, newspaper, magazine, or book, then you're going to need to use Photoshop to get it to that point. Although you can spend a lot of money on filters, too, Photoshop is the superior choice in any instance where the size of your image — and thus

Gautam Adani-promoted Adani Ports and Special Economic Zone Ltd (APSEZ) is all set to build a US $1.5-billion, world-class container port in India's eastern port city of Visakhapatnam to create a multimodal logistics hub.The project, which will add at least 10 million tonnes of container capacity, is expected to ease both the national and international commerce in the Visakhapatnam-Kakinada corridor and boost the state's economy. "In a few years, the proposed port will become the largest in Asia and perhaps the biggest in the world. The port, with a history of 900 years, is situated on the banks of a historic river, the Krishna, and will cater to vessels ranging from small boats to the world's biggest ships," APSEZ said in a statement. The company has built a $100-million pilot container terminal and a $500-million All-Weather Vehicle Storage Dock. Work on the 85 acres of land for the port is under progress. The company has also built an $8-billion integrated steel plant at Paradip to provide raw material and the major Indian and world port terminals have invested in setting up facilities to unload/load cargo. The Visakhapatnam port will be the second container port of the APSEZ which will be comparable to Hong Kong's deep water port.Q: Does the Arduino board speak with the computer in the same way? I am fairly new to the Arduino and programming. I recently bought an Arduino board because I thought it would be a nice project to make and it really would be but I realised that the board (and others like it) barely speak with the computer. As a beginner I thought it would be great to connect the Arduino to a computer using the USB port and run the Arduino code in the IDE and then upload the code to the board, but this obviously doesn't work because the board and the computer speak with different protocols, and the Arduino board won't use the USB port to connect to the computer. So my question is, is there a simple solution where a computer and an Arduino board can connect using the USB port on the board? Or is there another way to connect a computer and a board, such as via a serial-to-usb converter? Thanks. A: Is there a simple solution where a computer and an Arduino board can connect using

"I do, I really do," the Browns defensive star said. "I still haven't fully recovered yet from the game last week but I am fully healthy. You saw the medicine I took when the doctor told me to take an aspirin and an Advil. I'm back 100 percent and I am ready to roll." Garrett has said all he wants to do is play football. So what's holding him back? "I would have to say that just the worry of whether or not I'm ready physically and mentally to do what I've been doing because I have to go through some mental training in order to really be back and healthy," Garrett said. "I still have to do that. I have to get my weight up back to where it was before (the injury). I still have to get my knee better, but I will not get better if I don't play. It's that simple. I need to play. I missed football, I missed the offseason program and training camp. I missed it all because my time was off. "The past two weeks, every day has been trying to get healthy mentally and physically but I have not gotten there yet. I'm back on track to
