One of the many elements new to the game is reworked passing animations. Players will be able to pass the ball more fluidly. "We've built some new animations for passing," says David Rutter, Creative Director on FIFA 20. "Now when the ball is passed, it feels like it's being played by a ballet dancer, and the receiver has the freedom to dance around and use their skills. The new animations are also reactive to collisions, allowing players who are being tracked to stop the ball from going around them." "Reversible" Player Trajectory Physics AI Trajectory Alterations Three new Tactical Interaction Elements On-ball duels alter the angle and speed at which players interact with the ball. This allows for more tactical movement on the field, as players can use the ball itself as a

weapon. The quick turn-around animations, along with the match engine, allow for more fluid on-ball duels, and more precise cross balls. Players will be able to send balls into the penalty area in different ways, with precise angles and movement. "Take a pass on the ground," explains David Rutter, "when you make the first touch with the ball the player is being propelled along and when it comes off the ground it goes in the direction you are going." The game features "reversible" player trajectory physics. "The game allows us to reverse the direction at which a player runs," says David Rutter, Creative Director on FIFA 20. "This way if a player is being tracked, they can change directions at the last minute and evade their pursuer." AI Trajectory Alterations helps improve the natural speed at which players control the ball. As a result, players who regularly play control the ball using the dribble, are less likely to get tackled. Players are now able to alter their ball trajectory once it has been hit, instead of waiting for the AI to act. "They have certain animations for when they turn in a

controlled manner, when they run in a controlled manner, when they're playing a one-two with their teammate, etc," says David Rutter. "It's important that you're in total control of when you can turn and move, so that you're not relying on the AI to do everything for you."The three new Tactical Interaction Elements to be added to Fifa 22 Cracked Version are Tackling, Receiving and Shooting. All three can be set to be "silent" or "visible"
